

Custom Workshop Curtains

To prevent a tearing of the material, all four sides are hemmed.

The curtain comes complete with Velcro closure systems to seal the curtain on the height side.

The curtain is weighted with a chain hem and sweep to provide a seal along the ground to prevent unwanted movement from wind and air.

The curtain is on a rail system and can be folded back and stored when not in use.

Stanners is able to measure, supply and fit custom workshop curtains to your premises.

The curtains are designed to protect against draught, moisture, cold, dust and grinding debris.

Made from a heavy duty, 1.0mm thick flame retardant PVC, the curtains are supplied with eyelets across the width, completed with metal hanging rings every 300mm.

Coopies Lane Ind. Est. Morpeth Northumberland NE61 6JN

Rail System

Using hot dip galvanised steel brackets with stainless hardware, the ceiling mounted rail system allows the curtain to be easily pulled by the user to section off an area.

Mounted using tensioned tie rods to your workshop ceiling, the curtain rail is a stable and high quality system, giving you a bespoke sectioning system for your workshop.

Materials and Construction

Brass Eyelets every 300mm.

Velcro fastening to seal the curtain edges.

1.0mm, heavy duty and flame retardant PVC upper and lower section. -30°/+70° maximum. All seams double lock stitched.

1.0mm Polished clear window section, cold crack rated to -20° maximum.

All sections joined together using rot resistant thread.

A range of colours are available for the curtain to segregate areas, or just to match your workshop décor.

Chain weighted lower hem with sweep to seal against draughts and dust.

The workshop curtains are produced using a combination of the finest industrial vinyl available on the market. The curtain is flexible with high tear resistance and tensile strength.

Measuring and Fitting

As every workshop is different and one size doesn't always fit all, we offer a custom fitting service.

A member of the Stanners team will visit your site and take measurements for the fitment area of your custom curtain, building the curtain to your specs, location and design requirements. Once your custom curtain has been produced, our trained engineers will return to your site and fit the curtain.
